## 3 CAMERA PAN.TILT.ZOOM SYSTEM

The FarSight 3 Camera Video System from Hard-Line is used for LHD Remote Operation with pan-tilt-zoom features. From our 12" colour LCD monitor, an operator can view forward and reverse cameras which are mounted to the LHD. The PTZ (pan, tilt and zoom) camera can either be mounted

on the machine on the back or to a tripod. The PTZ camera is connected wirelessly to the monitor, from which the features are controlled. This innovative system allows an overall view of the work area when the bucket obstructs the view from the forward camera. Custom options are available.

**For more information on the FarSight 3 camera video system, call 705.855.1310 or email [sales@hard-line](mailto:sales@hard-line).**
